New Work for Cenovus Energy – Christina Lake Offsites Development

IMV Projects is pleased to announce that we have been selected by Cenovus to provide detailed engineering services for their Christina Lake Offsites (CLO) 2012 Development. This exciting project is a continuation of the current CLO 2010 Development.

The CLO 2012 Development involves two (2) new thermal heavy oil wellpads and a new steam and emulsion pipeline to supply the Christina Lake 1D plant that will be coming online shortly. Joe Venezia will be managing this important work on behalf of IMV Projects.

IMV Projects sincerely appreciates the opportunity to be of continued service to Cenovus and we look forward to working with them as they develop this world class resource.

For more information, please contact Alexandra Strauss at 403-537-8811.
