Solvent Co-injection Pilot Project – Detailed Engineering

We are pleased to announce that Petro-Canada has selected IMV Projects to provide Detailed Engineering services for their Solvent Co-injection Pilot Project after recently successfully completing the DBM and FEED Phases. This is a highly technical project which requires the implementation of innovative and original ideas.

Recognizing Petro-Canada's desire to provide high quality project management and project controls, Blair Chisan will continue as Project Manager. Blair brings a strong technical and project management dimension to our highly experienced project team. Blair and his project team's dedication and hard work on the DBM and FEED Phases have allowed us to secure the Detailed Engineering portion of work for this project.

IMV Projects is looking forward to continuing to work with Petro-Canada on this exciting initiative!
